

## Residency Projects

Evaluation of a pharmacy to dose pneumococcal vaccination protocol at an academic medical center
Evaluation of dosing strategies of intravenous unfractionated heparin in morbidly obese patients
Use of an electronic medication education tool to identify renal transplant patient health literacy and the effects of pharmacist education intervention
Prevalence of CYP3A5 genomic variances and impact on tacrolimus dosing requirements in kidney transplant recipients
Comparative efficacy of sequential nephron blockade with intravenous chlorothiazide or oral metolazone in acute decompensated heart failure
Thromboelastography-Platelet Mapping impact on time to CABG in patients receiving ticagrelor
A Comparison of the Medication Reconciliation Process in Patients Directly Admitted to the Hospital versus Patients Admitted through the Emergency Department
Evaluation of African American race as a risk factor for VTE development in the PICU
Evaluation of adverse events in patients receiving sedatives and/or analgesics diagnosed or at risk for obstructive sleep apnea (OSA)
Pilot Study Of Loratadine For The Prevention Of Pegfilgrastim-Induced Bone Pain In Breast Cancer Patients
Characterizing Medication Alerts within a Children's Hospital
Evaluation of the Rate of Inappropriate Therapy in Patients with a History of Bipolar Disorder
Treatment Outcomes of MRSA Colonized versus Uncolonized Patients with Documented MRSA Infection
Implementation of Pharmacist-Facilitated Discharge Services on an Internal Medicine Service
Use of Clonidine as an Adjunct to Morphine in the Management of Neonatal Abstinence Syndrome
Pharmacokinetic Analysis of Piperacillin/Tazobactam in the Morbidly Obese Surgical ICU Patient
Bleeding Events in ACS Patients Directly Admitted to a Tertiary Hospital versus Transfers from a Community Hospital
Intensive Glycemic Control Following Traumatic Brain Injury in Patients Admitted to the Surgical Intensive Care Units
Addition of Oral Metolazone to Intermittent Intravenous Furosemide Versus Transition to Continuous Infusion Furosemide in Acute Decompensated Heart Failure patients Experiencing an Inadequate Response to Therapy
